

LUMINOUS GRP PRODUCTS

UNIQUE TO DOOR INDUSTRY

UNIQUE SAFETY PRODUCT
LOW MAINTENANCE

"Where do you go when the lights go out... which way is out?"

Announcing the newest innovation for the safety industry, the unique luminous door, which actually **GLOWS** in the dark! It will continue to glow for some time following a power failure, ensuring visibility of safety exits, for ease of building evacuation.

The majority of safety exit doors are only marked with small signs, which are difficult to read at the best of times, and even harder to see during times of panic and when lighting has failed. Individuals can literally be left fumbling in the dark, searching for a safe way to exit a building.

However, imagine how much easier it would be if **you were able to see the whole of the exit door clearly**, as it glows to show you the way. The result - a safer and speedier evacuation of a building in times of emergency.

In normal conditions the door is designed to resemble any other white door that you may see. However, whilst it may look like any other door, in either natural or artificial lighting, the GRP composite door is actually charging ready for a time that its luminous quality may be put into play.

Should lighting fail during emergency conditions, the door will present as a clearly visible, luminous green object, attracting people to the exit, therefore guiding them to safety.

For complete peace of mind, this is definitely the design that all exit doors will need to follow in the future.
